

# Proposed Improvements for Illinois Highways FY 1998

Illinois Department of Transportation

## FISCAL YEAR 1998 HIGHWAY IMPROVEMENT PROGRAM

The Fiscal Year 1998 Highway Improvement Program provides for nearly \$1,085,000,000 in new construction and related highway improvement work. In addition, \$1.2 billion of work is currently under way from previous annual highway programs.

The proposed FY 1998 Highway Program emphasizes preservation of the existing system with limited new construction. It also provides a one-year extension of the local benefits program at reduced levels.

A total of 636 miles of highways and 290 bridges will be constructed or improved through the FY 1998 program. The program emphasizes maintaining control of increases in the backlog of deteriorated roads and deficient bridges. The program includes the rehabilitation of 628 miles of existing highways and the construction of 8 miles of new principal arterial highways that have been determined essential to the overall operation of the state's highway system. The improvement or replacement of 290 bridges involves only existing bridges. Funding is also scheduled for the completion of safety and traffic improvements at 328 locations.

Following is a breakdown of the anticipated accomplishments by highway system category.

<u>System</u>	<u>Resurface</u> (Miles)	<u>Widen &amp; Resurface</u> (Miles)	<u>New or Reconstruct</u> (Miles)	<u>Bridges</u> (Number)	<u>Safety/Traffic Improvements</u> (Number)
Interstate	129	-	4	56	1
Principal Arterials	-	-	8	-	4
Other State Marked	227	48	19	106	134
Unmarked	6	8	1	24	26
Local Roads and Streets	109	17	58	104	163
Total	473	73	90	290	328

The FY 1998 proposed highway improvement program is consistent with the Department's strategic goals to:

- o Maintain the interstate system in top condition
- o Protect Illinois' investment in the road and bridge system
- o Improve congested urban and suburban roads
- o Develop key major highways to attract business and industry

These improvements will be added to the \$1.2 billion of work presently under way on 790 miles of highway and 307 bridges from previous highway improvement programs. In all, nearly \$2.3 billion in highway construction will be under way during FY 1998, providing for the improvement or construction of more than 1400 miles of roads and 597 bridges.

The FY 1998 program will be financed by an estimated \$610 million of federal funds, \$435.7 million of state funds, and \$39 million of local funds. About \$840 million is for projects on the state highway system and \$245 million is for projects on local street and highway systems.

The amount of federal funds available to support the program is uncertain at this time because the current federal highway funding authorization expires at the end of federal fiscal year 1997. The U.S. Congress is expected to pass a new authorization act; however, programs and amounts are uncertain at this time. Federal funding estimates for the FY 1998 program are based on continuation of currently authorized federal program at the same funding ratios and approximately the same levels.

### FY 1998 Highway Program Accomplishments

The proposed accomplishments of the FY 1998 Highway Improvement Program are summarized in the following discussions of each program category:

#### Interstate Rehabilitation

The interstate system in Illinois, the third most extensive in the nation, was completed in 1988. Based on federal funding provided through ISTEA, approximately \$94 million of federal Interstate Maintenance funds are expected to be apportioned to Illinois in federal FY 1998 for improvements to its 2,164 mile portion of the national interstate highway system.

The earliest constructed interstate segments in Illinois are now over 45 years old and require significant investment to maintain. The FY 1998 highway program again emphasizes the effort toward rehabilitating the existing interstate system. The FY 1998 Interstate Rehabilitation Program provides \$295 million for the improvements to 133 miles of the interstate highway system. The \$295 million includes \$234 million financed with 90 percent federal Interstate Maintenance and National Highway System funds and 10 percent state match, \$43 million financed with 80 percent federal bridge apportionments and 20 percent state match and \$18 million state-only funded. The federal Interstate Maintenance funds apportioned in federal FY 1998 will be used to finance approximately \$104 million of the \$234 million federal financed improvements. The remaining \$130 million of the \$234 million will be financed by federal National Highway System funds and state match.

Approximately 25 miles of the interstate system in northeastern Illinois will be improved in FY 1998. The improvements include advance work contracts, the first stage of construction and the reconstruction of approximately 4 miles of inbound mainline roadway and 11 bridges on Interstate 55 (Stevenson Expressway) from California Avenue to the Dan Ryan Expressway in Chicago. New bridge decks and painting will be undertaken on four structures on the Interstate 94/90 (Kennedy Expressway) at Montrose Avenue, Grand Avenue, Halsted Street and Adams Street in Chicago.

Improvements to the downstate interstate system include approximately 108 miles of resurfacing and the replacement or rehabilitation of 36 bridges.

#### National Highway System

The National Highway System (NHS) was designated by law on November 30, 1995 and includes all interstate routes (including tollways), a large percentage of the urban and rural principal arterials, the defense strategic highway network (Strahnet), and Strahnet connectors. This means about 5,592 miles of Illinois highways (2,164 miles of interstate and 3,158 miles of non interstate routes) are currently eligible for the estimated \$127 million anticipated federal NHS apportionments to Illinois in federal FY 1998. The matching ratio for NHS-funded projects is 90 percent federal and 10 percent state for projects on the interstate system or 80 percent federal and 20 percent state or local funds for projects on non-interstate routes.

The FY 1998 highway improvement program includes \$142.6 million for federal NHS-funded projects. Those on the interstate system total \$129 million and those on the non-interstate system total \$13.6 million. If the federal NHS apportionments are not sufficient to fund the scheduled projects that are eligible for NHS funding, federal Surface Transportation Program (STP) apportionments may be used to finance the projects.

#### Bridge Replacement and Rehabilitation Program

The FY 1998 bridge improvement program totals \$292 million including \$232 million for bridges on the state system and \$60 million for bridges on the local system. The bridge program is primarily financed with federal bridge formula apportionments and the state and local matching funds. Other federal apportionments provided for improvements to the interstate system, to the National Highway System, and to other federally eligible routes are also used to finance bridge improvements. Some of the proposed bridge improvements are not eligible for federal funding and will be financed with state funds. The \$292 million program includes \$265 million of federally-funded projects and \$27 million of state-only funded improvements.

Normally, the federal funds provide for 80 percent of the project cost matched with state and local funds. However, many local agencies opt to use a lower ratio of federal funds in order to finance more projects with available federal funds.

The \$265-million federally-funded bridge program includes \$134 million funded with federal bridge formula apportionments, federal discretionary allocations for major bridges, and special federal discretionary timber bridge allocations; \$124 million funded with other federal

apportionments, and \$7 million financed with federal demonstration funds. The improvement scheduled to be financed with federal discretionary funds is the bridge replacement on Damen Avenue over the north branch of the Chicago River in Chicago. The federal discretionary bridge funds were allocated for this improvement in federal FY 1997. Only the federal funds are scheduled in the Department's Highway Improvement Program since the city of Chicago will let and award the contract and will provide the matching funds from its revenue sources.

Three projects in the FY 1998 bridge improvement program will be financed with the federal discretionary timber bridge allocations. These timber bridge projects are located on local roads or streets. The three bridges are the Riverside Island Bridge over Nippersink Lake in Fox Lake in Lake County, the Cumberland Road bridge over the Embarras River, 0.8 miles west of Greenup in Cumberland County, and the bridge on Cherokee Street over Lake Taylorville in Taylorville in Christian County. The federal timber bridge funds were allocated specifically for these projects in federal FY 1996 and federal FY 1997.

Discretionary bridge funds authorized in the ISTEA for high cost bridge improvements were significantly less during FY 1992-1997 than in FY 1987-1991. Due to the reduced amount of these special federal funds, Illinois chose to reserve 20 percent of its federal formula bridge apportionments during federal FY 1992-1997 for improvements to major bridges on the state and local highway systems. This major bridge funding allotment will be continued in federal FY 1998. Six bridge projects that have been selected to be financed with the funds allotted for the major bridge program will be implemented during FY 1998. Four improvements are on the state system and two are on the local system. The improvements include:

- the first contract of bridge demolition and removal for the future railroad grade separation and interchange reconstruction of Ogden Avenue over Illinois 50 in Cook County,
- the bridge removal, demolition, superstructure, and new deck for the structure on Marseilles Road at the Illinois River in Marseilles,
- the land acquisition required for the proposed improvement of Central Avenue at Grand Avenue and the CPRS Railroad in Chicago,
- the land acquisition required for the proposed bridge rehabilitation on US 24/150 at the Illinois River in Peoria and Tazewell Counties,
- the rehabilitation of the bridge on Laramie Avenue over Ogden Avenue and the railroad yard in Cicero, and
- the replacement of the bridge on Bluff Road over Bluff Canal, 9 miles south of Warsaw in Hancock and Adams Counties,
- the replacement of the bridge on West Stagecoach Trail over the Galena River and IC RR .5 miles east of Galena

Four proposed bridge improvements in the FY 1998 program will be financed with federal demonstration funds authorized in ISTEA specifically for these projects. Two projects are on the state system and two are local system improvements. The state system improvements include a joint repair and painting contract on Illinois 83 at the Little Calumet River in Cook County and the UP (CSXT) Railroad and a bridge replacement project at US 67 at Toms Creek, 0.25 miles north of the Alexis Wye in Mercer County. The two local projects are a bridge painting project for movable bridges in Chicago and the construction of a new bridge at 205th Street over Interstate 57 in Matteson. The construction of a new bridge at Mill/Freeman Street from Illinois Avenue to Wall Street in Carbondale is to be financed with federal Railroad Relocation Demonstration Funds allocated to Illinois in federal FY 1986. The estimated cost of these five improvements is \$7.3 million which is also included as part of the \$29.8 million federal demonstration funded program.

#### Surface Transportation Program

The federal Surface Transportation Program (STP) funds may be used by the states and local agencies for highway improvements on any roads that are functionally classified higher than local or rural minor collectors. STP funds may also be used for transit capital projects and bridge projects on any road. Transit projects are published in IDOT's proposed public transportation improvement program.

A portion (20 percent) of the federal STP apportionments to each state is subapportioned by the Federal Highway Administration (FHWA) specifically for the highway safety programs and for transportation enhancement programs authorized in ISTEA. These elements of the FY 1998 program are discussed in later sections. The remaining 80 percent is subapportioned by FHWA to the following four categories:

- o Each of the five Transportation Management Areas (TMA), which are urbanized areas of 200,000 population or more
- o Urbanized and urban areas of 5,000 to 200,000 population
- o Rural areas of less than 5,000 population
- o Any area of the state

The Department's FY 1998 highway improvement program provides \$228 million for STP-funded projects, including \$101.8 million for improvements on the state highway system and \$126.2 million for improvements on the local urban and rural systems. The federal STP funds normally provide for 80 percent of the project cost.

#### -- Local Urban Systems

The FY 1998 program includes \$101 million of federal STP-funded improvements on the local urban highway and street systems. Funds for this program are utilized by the city of Chicago, by the suburban metropolitan areas of the six counties in northeastern Illinois, by each of the ten urbanized areas of 50,000 or more population and by the 68 urban areas of 5,000 to 50,000 population in downstate Illinois. Projects are selected by local officials in consultation with the state and in accordance with federal regulations. The projects must also be consistent with established transportation management plans. The required matching funds are primarily provided by the local agencies.

#### -- Local Rural Systems

The FY 1998 program includes \$25.2 million for improvements on the local rural highway system. Funds for this program are distributed to the four counties in northeastern Illinois having rural areas and to each of the 96 downstate counties. The counties are responsible for the selection and development of the projects on their respective systems. The state provides financial matching assistance to some counties.

#### Congestion Mitigation and Air Quality

The Congestion Mitigation and Air Quality (CMAQ) Program is a new program category in the ISTEA to provide funds for projects in Clean Air Act non-attainment areas for ozone and carbon monoxide. Illinois has two non-attainment areas eligible for funding under this program. They are northeastern Illinois, including Chicago, and southwestern Illinois, including East St. Louis. The funds are to be used for projects that contribute to attainment of air quality standards through congestion relief. A substantial portion of these funds will be designated for public transportation improvements by the area Metropolitan Planning Organization (MPO). Projects to be financed with CMAQ program funds must be selected in consultation with the U.S. Environmental Protection Agency. These federal funds provide for 80 percent of the total cost of eligible projects.

The specifically identified CMAQ-funded projects in the Department's FY 1998 highway improvement program have been approved by the MPOs through structured selection processes and federal project approvals are to be administered by the FHWA. The total cost of the Department's FY 1998 programmed CMAQ-funded projects is \$15.6 million. This total includes projects on the state system which are estimated to cost about \$3.1 million and local system projects of about \$12.4 million.

The majority of the federal CMAQ allocation for the non-attainment areas in Illinois is being used for transit improvements administered through the Federal Transit Administration (FTA). These transit improvements are not funded as part of the Department's highway improvement program since the FTA awards grants directly to the transit agencies. Any state funds provided to match the federal transit grants are administered through the Department's public transportation program. Some projects approved by the Chicago Area Transportation Study (CATS) and the East-West Gateway Coordinating Council (EWGCC) for CMAQ funding are for the general transportation management studies, rideshare assistance, and the enhanced vehicle inspection and maintenance program. These activities are also not administered through the Department's highway improvement program but are financed through state appropriations provided for these purposes.

#### Safety

The FY 1998 program provides \$26.1 million for highway safety improvements, including \$17.3 million for improvements at high accident locations on both the state highway system and the local roads, and \$8.8 million for highway-railroad grade crossing improvements. Improvements at high accident locations on the state system total \$15.8 million. Those on the local highway systems total \$1.5 million.

The \$8.8-million highway-railroad grade crossing improvement program contains \$5.3 million assigned for crossings on state highways and \$3.5 million assigned for crossings on local roads and streets. The grade crossing projects will be selected during the fiscal year.

### Enhancement

The Illinois Transportation Enhancement Program (ITEP) for FY 1998 totals \$43 million. Eligible uses of funds for this program encompass a broad range of nontraditional activities specifically identified by the ISTEA. The type of projects emphasized in the ITEP are facilities for pedestrians and bicycles, historic preservation of transportation facilities, scenic beautification and outdoor advertising controls. There have been 247 projects selected thus far for this federally funded program. These projects, which total \$145 million, were selected in the spring of 1993, 1994 and 1995 through a process whereby applications were solicited by the Department and candidates were submitted by various government agencies. The projects are selected through a cooperative effort between the Illinois Departments of Transportation, Natural Resources (IDNR), and Commerce and Community Affairs (DCCA), the Historic Preservation Agency (IHPA), and the metropolitan planning organizations (MPOs). During the Department's FY 1993 through FY 1997 programs, 224 of the selected projects were constructed or engineered at a cost of \$82 million. Since the readiness of individual projects is uncertain, a lump sum amount has been included in the program for enhancement projects to be implemented during FY 1998.

### Demonstration

The FY 1998 demonstration program totals \$29.8 million for improvements which have been specifically identified as demonstration projects in federal highway program authorization acts or appropriations.

Federal demonstration funds provided prior to the ISTEA will be used to implement a parking improvement, estimated at about \$1.1 million, at the Rock Island Railroad commuter station in the city of Chicago at 91st Street and Vanderpoel. Federal Railroad Relocation Demonstration funds are scheduled to finance a new railroad grade separation on Mill Street/Freeman Street in Carbondale. The estimated cost of the Carbondale project is \$6.3 million and will be financed with \$2.7 million of federal Railroad Relocation Funds and \$3.6 million of Grade Crossing Protection Funds which are not provided as part of the Highway Improvement Program.

Federal Railroad Demonstration funds are also scheduled for land acquisition and construction engineering activities for a new bridge in East St. Louis on State Street at the AS RR between 40th Street and 45th Street.

Federal demonstration projects identified in the ISTEA are scheduled in the FY 1998 program for an estimated \$25.5 million. Upon completion of the FY 1998 program, two of the projects that are identified in ISTEA to be financed with federal demonstration funds will not yet have been initiated but are scheduled for implementation during FY 1999-2002. These include:

- the feasibility study for a 4-lane access road to the proposed expansion of Jefferson Memorial Park in East St. Louis, and
- the reconstruction of 183rd Street from Pulaski Road to Cicero Avenue in Country Club Hills.

### State Only Program

A total of \$350.7 million is scheduled in the FY 1998 program for non-federal funded improvements. This \$350.7 million includes the \$18 million for improvements to the interstate highway system and \$27 million for the bridge improvement program. The remaining \$305.7 million are scheduled for roadway preservation improvements on the non-interstate highway system. The programs discussed in the following paragraphs account for \$131.4 million. The other \$174.3 million are scheduled for specific route improvements that do not qualify for federal funding or that exceed the federal funds available for the program.

Nearly \$42 million will be used for traffic control improvements, contract maintenance, improving state park roads, and environmental-related studies. Traffic control improvements include sign rehabilitation and maintenance, pavement marking, speed monitoring equipment, and portable weigh scales.

Contract maintenance includes intermittent resurfacing, bridge repairs, and other roadway-related improvements that are performed by non-state forces. The program includes \$23.7 million for these improvements. The intermittent resurfacing component of the contract maintenance item will result in the improvement of an estimated 25 to 50 miles of state routes. However, since this estimate is not associated with identified projects, it is not included in the anticipated accomplishments miles in the table on the first page.

The Department of Transportation, in cooperation with the IDNR, IHPA, and local agencies, provides assistance to repair roads in and near facilities operated by the two state agencies (IDOC & IHPA). These Department of Transportation funds finance projects which improve access to and within state parks, historic sites, forests, and conservation areas. The FY 1998 program includes \$5.3 million for this program.

Environmental studies will require an estimated \$6.2 million of the FY 1998 programmed funds. These studies will assess the impact of proposed highway improvements on archaeological, historical, biological, and agricultural areas and sites. Also included are wetland and hazardous material surveys and studies to determine measures needed to mitigate hazardous material sites.

The Department's Economic Development Program provides a funding source for highway improvements that will be a positive force in the location/selection/expansion process of existing and/or new industrial/manufacturing/tourism developments. The state highway funds provided through this program for improvements to roads not on the state highway system require a 50 percent match from a local government unit or developer, as well as a commitment from the business/industry involved to locate in the area of the road improvement. The Department has agreed to fund proposed highway improvement projects totaling \$11.1 million in association with this program and additional candidate projects are under consideration. The FY 1998 Highway Improvement Program includes \$5 million to implement the projects associated with this economic development initiative that should be ready for contract awards during the fiscal year.

The FY 1998 Highway Program provides another one-year extension of the local benefits program which was established for FY 1990-1994. In FY 1998, \$32 million of state funds will be provided specifically to assist local agencies. This \$32 million includes \$7 million for needy counties and townships, \$3.5 million for high-growth counties and cities, \$2.1 million for counties to compensate for decreases in assessed valuation, \$4.4 million to help local governments upgrade designated truck routes, and \$15 million in state funds for the local township bridge program. Because of the decline in the State's highway improvement program, the amounts to be distributed for assistance to high growth counties and cities (\$3.5 million) and to counties with decreased assessed valuation (\$2.1 million) are 12.5 percent less than the amounts appropriated for FY 1998.

The \$15 million for local township bridges is additional to the \$292 million bridge improvement program for FY 1998. These state funds are distributed to road districts and townships for the improvements of bridges 20 feet or more in length. During FY 1990-1996 the annual average number of bridges improved was 173. The improvements include minor repairs, major rehabilitation, and replacement. The number of bridges to be improved with the \$15 million in FY 1998 is difficult to predict and is therefore not included in the table of anticipated accomplishments.

In addition, \$478.5 million of state motor fuel tax funds will be distributed to municipalities, counties, and townships for repair of local roads and bridges during FY 1998. This \$478.5 million is in addition to the Department's \$1,085,000,000 highway improvement program.

#### Engineering Services

Extensive engineering activity is required to complete the necessary studies, to prepare the construction contract plans, and to supervise the construction activities. To accomplish this without appreciably increasing personnel headcount, the Department must secure outside engineering services. A total of \$55 million is scheduled for consultant engineering services to be financed with program funds appropriated for the FY 1998 Highway Improvement Program. The engineering work is identified separately in the project listing.

#### Other

The FY 1998 program includes funding for federally authorized Equal Employment Opportunity training programs and supportive services. The ISTEA included the provision that not less than 10 percent of the federal funds appropriated shall be expended with business concerns owned and controlled by women and socially and economically disadvantaged individuals. The Department has developed and placed into operation a statewide plan to exceed these federal requirements. As part of the statewide plan, the Department is funding a comprehensive supportive services program to assist female and minority owned businesses to bid on and obtain highway contracts. The amount programmed for this activity in FY 1998 is \$2.5 million.

A few projects in the FY 1998 program are scheduled to be financed with special federal funds provided for road repairs needed to correct damage caused by severe storms and flooding. The federal Emergency Relief funded improvements are on Illinois 47, 1.5 miles north of US 34 at Yorkville in Kendall County, Orangeville Road at the west corporate limits of Orangeville, Toboggan Road west of I-55 in Tazewell County, Camden Road east of the LaMoine River in Schuyler County, FAS 603 .5 miles west of Nebo in Pike County, CH 2 in Valley City in Pike County, Richfield Road at a stream 2 miles east of Richfield in Adams County, and State Street east of Rim Road, 1.5 miles east of Quincy in Adams County, FAS 756 and FAS 761 from Batchtown to FAS 754 and Hamburg to Hardin in Calhoun County, FAS 756 1 mile west of FAS 754, and FAS 1919 3 miles south of Carbondale in Jackson County.

Illinois received allocations of \$380,917 and \$378,945 respectively in federal FY 1996 and federal FY 1997 to implement the National Recreational Trails Funding Program. The allocations are suballocated into 7 percent amounts for state administrative costs, 5 percent for state environmental protection and safety education, and 88 percent for the development and maintenance of recreational trails and trail related projects for non-motorized and motorized uses. The Illinois Department of Natural Resources will select and manage the projects to be financed with these federal funds. A \$735,170 program has been developed to utilize the \$380,917 federal FY 1996 allocation. The remaining \$354,253 will be financed with state funds appropriated to the Department of Natural Resources. Scheduled in the Department's FY 1998 program are the \$759,862 of federal funds with the expectation that the Department of Natural Resources will implement projects during FY 1998 to fully utilize these funds.

A new initiative in the FY 1995, FY 1996, and FY 1997 highway improvement programs was the installation of innovative grade crossing protection devices at locations along the Chicago to St. Louis high speed rail corridor. These protection devices, known as vehicle arresting barrier (VAB) systems, are being installed at three existing rail-highway grade crossings to test their capability as railroad crossing protection devices. The VAB units will be evaluated to determine their effectiveness in preventing train/vehicle collisions at grade crossings in the proposed Chicago to St. Louis high speed rail corridor. These units are being installed at crossings in Hartford, in McLean and near Chenoa. The FY 1998 program includes \$575,000 for a contract with a firm that will be responsible for maintaining the VAB units which will include resetting the units after they have been deployed. The costs of manufacturing, installing, and maintaining these devices through the 18-month contract are 100 percent financed with Section 1010 federal funds provided in ISTEA for this purpose.

This Fiscal Year 1998 Highway Improvement Program is the formally adopted schedule for the proposed implementation of the projects contained herein.

Guide to the Project Listing

The projects included in the FY 1998 program are grouped by State Highway District. Within each District, projects are listed under six headings.

- o State Construction,
- o State Engineering,
- o State Land Acquisition,
- o Local Construction,
- o Local Engineering, and
- o Local Land Acquisition.

Individual projects are listed within these six headings in descending route marking order, i.e., Interstate, US, Illinois, and other. The types of funds to be utilized for the project are identified by symbol in the listing; the symbols and their attendant funding categories are shown in Table 2. Projects in some categories, such as railroad-highway grade crossing safety and some statewide and districtwide items, will be identified and selected during the fiscal year.

The FY 1998 Highway Program emphasizes preservation of the existing system with limited new construction. The section of Illinois 81 in Henry County from Galva-Atkinson Road to the west corporate limits of Kewanee shown above is typical of the 546 miles of proposed resurfacing and/or widening and resurfacing in the FY 1998 Highway Program.

Illinois maintains 2,164 miles of Interstate highways which continue to be a priority of the Department. Shown above is the resurfacing of the northbound lane of Interstate 57 from Edgewood interchange to 4.5 miles north of Edgewood in Effingham County. The FY 1998 Highway Program contains 129 miles of resurfacing, four miles of reconstruction and 56 bridge improvements on the interstate system.
